

# Talemate Platform

## A fully integrated multifunctional software platform.

The **Talemate Platform** is a software system to control, guide and link robotics, IoT and virtual environments in both the real and the virtual world.

The complete platform is operated by a 'no-code' system: a unique environment with building blocks that can be used without technical skills.

The **Talemate Platform** gives live to:

### VIRTUAL ENVIRONMENTS

Create, guide and control your own smart virtual environment populated by robots and avatars of actual people, showcasing anything you desire.

#### INCLUDING:

- Possibility to change the virtual-experience over and over again
- Ability to scan yourself
- Compatible with VR-goggles

### IOT - SMART DEVICES

Connect +10 mio smart devices from over 2.000 brands to operate independent in collaboration with each other.

#### INCLUDING:

- Fully MQTT compatible (Multiple brokers)
- Connecting complete home-environments
- Fully open API
- Up to 20 times faster project

### ROBOTICS

Guide and control any robot to act, react and complete complex tasks as you desire.

#### INCLUDING:

- Auto Navigation of your robot with floorplan and points of interest
- Fully open API
- Launch your app on our KIOSK

Combine and guide IoT smart devices in real and virtual environments. Connect AI and third party applications and test any action in a no-code digital twin.

Combine complex tasks for robotics to perform in real life in collaboration with actions from smart devices.

Fully integrated projects  
Docker container  
Multilingual: 50+ available languages  
No technical skills required to operate  
Whitelabel option  
AI integrations
